

# Grids, Guides and Views

## **Clipping plane - Sometimes the front part of my object disappears, it's cut off and I can't get it to come back.**

You're encountering the clipping plane, which is just the "front" of the 3D modeling space.

To readjust your view, select the View Move tool and click and drag one of the corner handles down. This will back up your view so that all of your object is in the view.

You could also use Fit Views to All or Reset View from the Windows menu to reset your view.
