

# Illustrator

## **I can't import an Illustrator file containing text, it opens up blank. I tried outlining my logo, but only the 'K' was solid.**

There are a few things you should do differently with your .ai files.

First, you've made a Compound Path out of all the text. You want only those letters with holes in them, the Os and R in this case, to be Compound Paths and they should be done separately.

Second, Strata is an RGB program. It won't work with CMYK colors. You should make all your Strata-bound Illustrator documents RGB.

Third, use the native .ai file format.
