

PC/Windows

CX 7 - nVidia cards - I have an nVidia graphics card, and I'm seeing some strange things in the modeling window display.

Strata Design 3D CX utilizes the 3D graphics card in your computer for drawing the modeling windows. This can include, but is not limited to the movement of objects and displaying textures in the various windows.

It is also used for other functions in the program. It is usually a good idea to keep your graphics drivers up-to-date.

Strata Design 3D CX users with nVidia graphics cards are strongly encouraged to set your Display Preferences to Millions of Colors (32 bit) for the best possible user experience.
