

Live 3D PDFs

What is the difference between Live 3D CX and Live 3D PDF?

Strata Live 3D PDF is a small application that ships with the full-featured Live 3D CX software, which provides a quick way to add 3D content to PDF documents. Live 3D PDF was designed to allow users to easily integrate 3D content into electronic brochures, sales sheets, technical manuals, etc.

The basic Live 3D PDF workflow can be summed up in a few simple steps:

1. Open a PDF document
2. Import 3D content
3. Edit UI placement where necessary
4. Save out your new Strata 3DPDF

You can import existing 3D content, or .xmm files using Live 3D PDF. The .xmm format is the native file format for the full featured Live 3D CX application.

For more information about how to use the software, see the Live 3D PDF User Guide, which is located in the Help menu.

For complex projects, you will want to use the full Strata Live 3D CX application. Once you have optimized and fine-tuned your 3D model, you can use Live 3D PDF to place it in a new or existing PDF document.

Unique solution ID: #1081
