

## General

# Holes or Indentations - Can Foto 3D CX 2 handle objects with holes or indentations?

Yes. Although Foto 3D creates its geometry from the silhouettes of objects, there is a way to mask holes in an object. See pages 41, 95 and 96 in the User Guide.

In some cases, however, you may need to export and edit the geometry in a 3rd party modelling application such as Design 3D.
