

General

Trapping - Can Enfold 3D handle trapping, and work with Esko's trapping program?

Since Enfold 3D is an Illustrator plug-in, all the functionality of Illustrator is available to you.

The Strata Enfold 3D plug-in and the EskoArtwork PowerTrapper or InstantTrapper, or trap-X (the previous name) can work next to each other without any problem.

The trapping created in Adobe Illustrator files will also show in Enfold 3D window. As the trapping made by the EskoArtwork PowerTrapper is created on a separate layer, you can even choose to add the trapping to an exported u3d or tiff.

Unique solution ID: #1376
