

Photoshop

CX 7.5 - Do any Photoshop plug-ins come with Design 3D CX 7.5?

No, the Photoshop plug-ins have been discontinued as of Design 3D CX 7.5. These optional plug-ins are not compatible with Photoshop CS 6 and later due to significant changes made by Adobe, and the decision was made to discontinue them.

There are several features in Design 3D CX (including v7.5) that work with any version of Photoshop and do not require any special plug-ins. These take advantage of 2D Photoshop files:

- Link to Layered Photoshop Document in the Image Texture dialog allows you to use a linked PS file as an image map. Changes made in the PS file are automatically used in the Design 3D texture.
- Render to (Photoshop) Layers - this outputs your rendering in PS layers for easy post-production work.
- Image maps created in any version of Photoshop and saved (as TIFF, JPEG, PSD, etc.) can be loaded into the texture channels as image maps for creating textures.
