

# Animation

## **Export as Quicktime - I'm trying to set up my first movie and when I Export to a QuickTime movie from the modeling window, it doesn't work.**

You cannot Export an animation directly to QuickTime from the modeling window.

You need to first Render your animation, using the Render Image dialog. Select All or a Frame Range in the Render dialog - otherwise you will just render a single image.

Once you click Render in the Render dialog, you can enter a name, location and file format in the dialog which appears.
