

# StrataLive3D.Com

## How do I embed my 3D object into a website?

StrataLive3D.com lets you easily embed your 3D content into your own website, a client's website, or anywhere else content can be used. This works much like a YouTube video.

Once you get your 3D content uploaded to StrataLive3D.com, it's simple to generate an embed code:

1. Click on "Edit Online Live 3D Assets" on the left side of StrataLive3D.com.
2. Find the object you want to embed, then click on the "Embed" button below the object preview. This will generate the html code that allows you to embed your Live 3D object into a website.
3. Follow the instructions; copy and paste the displayed code into an html section of a website.
