

Camera

Moving - I have a hard time selecting and moving cameras once I put them in the modeling window.

Most likely your Active Grid is the Y grid, which would be viewed edge on when viewing from the Front, Back, Right or Left.

That would prevent you from being able to manipulate objects from those views. You need to either manually switch your Active Grid (x, y, z keys) or you can turn the Auto Grid setting on in the Preferences > Windows dialog or by using the Enable Auto Grids command in the Scripting menu.
