

# Camera

## Linking - How do I link a camera to a Bezier line I've drawn?

First draw the path using the Bezier Pen tool, then put a camera in the scene.

Choose the Convert to Path tool from the Tool palette. Using this tool, drag from the camera to the path. The path will highlight in red.

The Convert to Path tool is located in the Joint and Bones tool pop-up under the Joint tool (Looks like a bone) in the main Tool palette.

Unique solution ID: #1367
