

Strata 3D - Legacy Versions

Memory allocation - How do I control memory size for Design 3D? I am getting 'out of memory' messages.

There is no need or way to control the memory allocation for Strata 3D CX, it is all handled by the operating system now. The OS will give the program as much memory as it needs up to the limits of the system.

For Design 3D CX v6 and later, you will need a minimum of 2 GB of RAM, and more is highly recommended.
