

Strata 3D - Legacy Versions

Illustrator - I am unable to import a single letter from Illustrator CS2. I have tried all the .eps formats.

If you have Design 3D CX (v4.x or later), you do not need to use the .eps format. We have updated the program to read the native .ai format.

Text in Illustrator must be converted to paths before Strata can read it. If the letters have holes in them they must also be converted to Compound Paths.

Unique solution ID: #1120
