

Strata 3D - Legacy Versions

Export > Flash > Flash & S3D

2002-06-22

Question: Can I export to Flash format from Strata 3D?

Answer: Version 3.6 has can output a flash images or animations.

Older versions of Strata (2.5.3 to 3.5) do not support output directly to Flash. There is a work around by going through Swift 3D. Render out in any OpenGL mode saving the output as individual frames then have Swift convert them to .swf. I don't have the details but one user has a couple of web sites at <http://www.zuidzijde.nl/classic/Welkom.html> and <http://www.gerritsmainterieur.nl/>.

You can contact him at <mailto:info@zuidzijde.nl>. His name is Fabrice.
