

# Strata 3D - Legacy Versions

## Startup - 2002-06-22

**Question:** I am on a G3 with ample disk and ram....cannot start up program, it freezes everytime. What should I be looking for to solve this problem?

**Answer:** You should look at the OpenGL drivers, and they should be at least version 1.2.1

Also, do not allocate more memory than the suggested size. Strata goes through the modern memory manager to get memory from the unused memory.

You may need to start up with limited extension group as well.
